Barcelona Smart Open City

empowering people

access to technology: tools & skills

Barcelona Open City:

2 platforms and 2 places for people and technology

movement driven by public administrations to
maximize available public resources,
sharing the information generated by public bodies,
allowing its access and use for the common good
and for the benefit of anyone and any entity
interested

Territory   Population   Urban enviroment   Administration   Economy and Business

A platform for consulting and downloading open data. It contains 449 datasets, in 23 formats and 2502 resources.

99% of the data has 3 stars of the classification of open data, which implies that data is accessible to the Internet, in structured data formats, and that there are not owners.

open data: WiFi density of access points

digital and public participation platform which promotes new participatory processes to produce municipal policies in collaboration with citizens and stakeholders.

open source software and open code

changing the paradigm of the current industrial economy, connecting citizens with the advanced technologies that are transforming our everyday life

Fab lab

building a new economy based on distributed data
and manufacturing infrastructure

stimulating young talent

Ca l'Alier: a new urban innovation center
